SUMMARY

Senior Product Manager, 8+ years across product and engineering, who finds, funds, and ships applied GenAI inside large, regulated enterprises. At Ford's AI Advancement Center, owns three GenAI products in pilot or production – document-intelligence validation, human-in-the-loop agentic audit, and a RAG platform at 180 monthly active users. Shipped ML products at JPMorgan Chase from 2023: predictive anomaly detection and a self-service LLM assistant. Engineer by training; works close to evals, retrieval quality, and the trust threshold that decides whether an AI product actually gets adopted.

EXPERIENCE

Ford Motor Company, Bangalore

Jun 2026 – Present

Senior Product Manager — AI Advancement Center

- Own **PPAP AI**, a document-intelligence product validating supplier Production Part Approval submissions – **9–11 hours** of manual engineer review each, against the **45–60K** validations Ford runs annually. Diagnosed multi-format parsing, not model reasoning, as the accuracy ceiling; made extraction deterministic and confidence-scored so engineers see *why* a field failed rather than trust a black box. Scoped the 6-week POC to the **4 of 18** elements tied to stop-ships and warranty recalls; in engineer trial from September 2026.
- Shipped a **human-in-the-loop agentic audit system** for Ford's vendor tooling spend, parsing and cross-referencing invoices, purchase orders and proofs of payment across internal systems – reviewer effort from **5–6 hours to ~10 minutes** per audit, coverage expanding from **33% of spend toward 100%**. Kept mandatory human sign-off on every audit because the output moves money: the system evidences, the auditor decides. Reached pilot in under 2 months with a 2-engineer team.
- Own **AI Notebook**, a RAG platform over Ford's SharePoint, Confluence and internal data at **180 monthly active users** – aimed deliberately at non-technical verticals (marketing, finance, HR) with no equivalent of the developer-side AI stack. User feedback is redirecting the roadmap from notebook-and-chat toward generated artifacts and workflow automation.
- Built the capability-and-engagement pitch taking the AI Advancement Center to Ford's business verticals – portfolio-backed, with three engagement models (self-serve platform, bespoke build, joint build on the vertical's own data) – to source and qualify the next set of high-value GenAI use cases.

JP Morgan Chase, Bangalore

Jul 2018 – Jun 2026

Technical Product Manager (AVP)

Feb 2023 – Jun 2026

- Shipped **Ripple**, an ML-driven ROI analytics platform, in **6 months** – led a cross-functional team of 8 across data science, engineering and UX, secured 3 pilot teams, and set the roadmap for firm-wide rollout. Firm-wide Innovation Award finalist.
- Cut daily operational anomalies **80% (1,000+ to 200)** by designing a predictive detection workflow, preventing **\$2M+** per day in potential settlement failures.
- Shipped a **self-service LLM assistant** for data investigations – resolution time from hours to minutes for **50+ analysts**, removing a standing dependency on central data teams.
- Owned the roadmap for a platform processing **1M+ daily trades** and 10M valuations across Product Control, Finance and Regulatory stakeholders; cut upstream integration time from **45 to 10 days** with a standardized onboarding framework, unblocking 3 new asset-class launches.

Associate Technical Product Manager, Data Platform

Feb 2021 – Jan 2023

- Built an enterprise data platform serving **20+ downstream consumers** by replacing batch exports with stream-based delivery – **40%** cut in daily processing time, enabling near real-time analytics.
- Achieved **99.9%+ data accuracy** with a standardized onboarding and validation framework, adopted as the blueprint across 4 additional domains firm-wide; drove alignment across 5 engineering pods in an ambiguous, contested problem space.

Software Development Engineer II

Jul 2018 – Jan 2021

- Built high-availability Java microservices supporting **2M+ daily transactions** with **99.9% uptime**, and reduced operational risk by replatforming legacy C++ systems to modern Java architecture, mentoring 2 junior engineers through the migration.

AI PROJECTS

- **Compass.ai** – AI-personalized learning platform with skill decay prevention and adaptive roadmaps. Built multi-agent architecture using LangGraph + RAG for dynamic curriculum generation.
- **Privacy-First File Organizer** – Local AI-powered file organization tool for macOS using Ollama. Achieved **10x** performance improvement through batching and parallel processing.

SKILLS

AI/ML: Agentic Systems, Document Intelligence, Multi-format Document Parsing, LangGraph, LangChain, RAG Pipelines, OpenAI APIs, Predictive Analytics, Anomaly Detection, Prompt Engineering

Data & Cloud: SQL, Python, Data Warehousing, AWS (Lambda, S3, SQS), Docker, CI/CD, System Observability

Product: 0-to-1 Platform Ownership, Human-in-the-Loop System Design, User Research, Roadmapping, PRDs, Cross-functional Leadership, Stakeholder Management, OKRs, Agile

EDUCATION & CERTIFICATIONS

B.E., Electronics & Electrical Engineering (Minor: Finance) – BITS Pilani, Goa Campus

2014 – 2018

Executive Certificate in Product Management – Indian School of Business

2022

AWS Certified Cloud Practitioner

2023

LEADERSHIP & IMPACT

- **Scaled PM community:** Founded and led JPMC Bengaluru PM Community events (ProdCon, Prodathon), growing attendance from **50 to 500+ professionals** across 2 years by recruiting speakers and designing hands-on workshops.
- **Mentorship:** Coached **4 associate PMs** on roadmapping and stakeholder management.
- **Innovation:** Finalist for firm-wide Innovation Award for Ripple Platform and Cash Reconciliation automation.
- **Knowledge sharing:** Author of “Technology in Investment Banking” newsletter on systems and data flows behind global finance.
